

CLAIMS

1. A bracket for mounting a sun screen, in particular in a niche, by means of screws or similar fastening devices, comprising at least one hole in the bracket and a washer fitted between the head of the fastening device and the bracket,
5 characterized in that the hole (7) in the bracket(1) is circular, that the washer has a circular, plateau-shaped part (9) in a first plane, with a diameter equal to the diameter of the hole (7) and fitted rotatably in the hole (7), and a surrounding ring-shaped part (5) with a larger diameter in a second plane resting on the bracket
10 (1), and in that the washer is provided with an oblong hole (3) in the circular plateau part.
2. A bracket according to claim 1, characterized in that the oblong hole (3) has a length that is equal to the diameter of the circular part (9).
- 15 3. A bracket according to claim 1, characterized in that the ring-shaped part (5) has a serrated edge (11).
4. A bracket according to claim 1, characterized in that the circular part (9) has projecting parts (p') on that side of the element that is opposite the ring-shaped part (5), for holding the washer (5, 9) in the hole.
- 20 5. A bracket according to claim 1, characterized in that there is established a click-adjustment (11, p) of the angle of rotation of the washer.

6. Use of a bracket according to claim 1 in conjunction with at least two fastening devices comprising a head and a shank, characterized in that the circular parts (9; 10) of the washers are placed in the holes (7; 8) of the mounting bracket, 5 that a fastening device is fitted through the oblong hole (3; 4) with clearance between the head and the washer, that the ring-shaped parts (5; 6) are rotated with respect to both fastening devices during alignment of the bracket (1) to its desired position, until the oblong holes (3; 4) permit free passage of the shanks of the fastening devices, whereupon the fastening devices are tightened in order to maintain the aligned 10 position of the bracket (1).
